surface that is flat cut at an angle with stair steps, to turn on two streams of water at a time. These streams would be parallel with one another and then add one stream to each side as the internal part moved in the downward direction. Another design would be to incorporate multiple designs on the upper collar for special patterns, such as end 5 strips or side strips, for example, and this could be provided in conjunction with an internal helix or slice design.

It will be apparent from the foregoing that while particular forms of the invention have been illustrated and described, various modifications can be made without departing from the spirit and scope of the invention. Accordingly, it is not intended that the invention be limited, except as by the appended claims.
